

Ipamorelin (IP10) – 10mg

\$60 10mg vial

Ipamorelin is a selective growth hormone secretagogue receptor (GHSR-1a) agonist widely utilized in endocrine and peptide-receptor interaction research. Known for its receptor specificity, Ipamorelin provides researchers with a controlled model for investigating growth hormone signaling pathways and hypothalamic-pituitary axis dynamics.

Supplied as a high-purity lyophilized laboratory reagent, Ipamorelin is manufactured to support reproducibility and precision in in-vitro and preclinical research environments.

Research Focus:

GHSR-1a Receptor Activation: Studying selective receptor binding and downstream intracellular signaling cascades.

Endocrine Axis Modeling: Investigating hypothalamic and pituitary signaling interactions in laboratory systems.

Peptide-Receptor Specificity Studies: Evaluating selective agonist behavior compared to broader secretagogues.

Cellular Signal Transduction: Researching second-messenger activity following receptor engagement.

Technical Specifications:

Classification: Growth Hormone Secretagogue Receptor (GHSR-1a) Agonist

Format: Lyophilized Laboratory Reagent

Quantity: 10mg per vial

Purity: >99% (HPLC Verified)

 **STRICTLY FOR RESEARCH USE ONLY:** This product is a laboratory reagent intended solely for scientific research and in-vitro evaluation. It is NOT a medication, supplement, or food product. It is strictly NOT for human consumption, injection, or therapeutic use. Sale is void where prohibited by law.
