

Bacteriostatic Water – 30mL

\$28.00.

Sterile bacteriostatic water supplied in a 30mL multi-dose vial. This product contains 0.9% benzyl alcohol as a preservative to inhibit microbial growth and is intended for laboratory research applications requiring sterile diluent solutions.

Manufactured under sterile conditions and sealed for laboratory handling.

Product Overview

Bacteriostatic water is commonly utilized in laboratory environments as a sterile diluent for reconstitution of lyophilized research compounds.

Each 30mL vial contains:

- Sterile Water for Injection
- 0.9% Benzyl Alcohol (preservative)
- Multi-dose vial format

Laboratory Applications

- Reconstitution of lyophilized research compounds
- Controlled dilution procedures
- Multi-dose laboratory preparation
- Sterile solution handling within research settings

This product is intended strictly for laboratory research use.

Technical Specifications

Volume: 30mL

Preservative: 0.9% Benzyl Alcohol

Format: Multi-Dose Sterile Vial

Packaging: Sealed glass vial with rubber stopper and aluminum crimp cap

Storage Guidelines

- Store at controlled room temperature
- Protect from excessive heat or freezing
- Discard according to laboratory safety standards

Important Notice

FOR RESEARCH USE ONLY:

This product is intended solely for laboratory research and in-vitro applications. It is not a dietary supplement and is not sold for human consumption unless used under the direction of a licensed medical professional in accordance with applicable laws.

By purchasing this product, you acknowledge responsibility for proper handling and compliance with all applicable regulations.

Optional Add-On (Sales Optimization)

Under this product, you can add:

Frequently Purchased With:

- GLP-1 – 20mg
- BPC-157 – 10mg
- TB-500 – 10mg

This increases cart value immediately.
