

Selank (SK10) – 10mg

\$40.00

Selank is a synthetic heptapeptide analog studied in neurochemical and receptor-binding research. Designed for laboratory investigation, Selank provides a model compound for examining peptide influence on neurotransmitter regulation and immune-neuroendocrine interaction pathways.

Manufactured under strict quality controls, Selank is supplied as a lyophilized reagent to support reproducibility in structured research environments.

Research Focus:

Neurotransmitter Regulation Studies: Investigating peptide interaction within GABAergic and monoaminergic pathways.

Receptor Binding Analysis: Evaluating peptide affinity and signal cascade activation in vitro.

Immune-Neuroendocrine Modeling: Studying cross-system signaling interactions in laboratory settings.

Peptide Stability & Activity Research: Examining structural integrity and receptor specificity.

Technical Specifications:

Classification: Synthetic Heptapeptide

Format: Lyophilized Laboratory Reagent

Quantity: 10mg per vial

Purity: >99% (HPLC Verified)

 **STRICTLY FOR RESEARCH USE ONLY:** This product is a laboratory reagent intended solely for scientific research and in-vitro evaluation. It is NOT a medication, supplement, or food product. It is strictly NOT for human consumption, injection, or therapeutic use. Sale is void where prohibited by law.
